

## Installation Instructions for Mounting a Locking Strip on a Buffet Stand

- The Newleaf Gravity Feed bin is installed using Locking Strips. Proper installation of the locking strips will insure that the bins are kept firmly in place.
- THESE INSTRUCTIONS **MUST** BE FOLLOWED.

- Clean all residue off of the top of the Buffet stand with isopropyl rubbing alcohol.
- The Locking Strip mounts on the back edge of the Buffet stand (on the side where holes are located).
- Make sure to only apply the Locking Strip in an area where the temperature is between 65 – 100° F.

- Take the Locking Strip and peel away the protective backing from the 3M™ adhesive and position the strip.
- Firmly press down the entire length of the strip to ensure maximum adhesion.
- Once the Locking Strip is applied, it cannot be re-applied using the same strip.

Check the locking strip on a daily basis to assure the bins are always properly secured to the shelf.

- Allow the locking strip about 30 minutes to an hour to properly set, and then you can mount the Gravity Feed bins.
- Slide the bin straight back and “click” into place. (There is no need to tilt the bin.)
